This course is eligible for:

4 Life & A&S CE Credits for BC, SK, MB & ON.

4 Life CE Credits ONLY for AB.

General CE Credits as marked on certificate for some Provinces.

What will the Financial Advisor learn as a result of completing this course?

A financial advisor is required to know his/her client, including their tolerance for taking risks.

It's your client's life and their money, but how can an advisor really know their attitude of what risk they can accept unless the advisor gets to know the client and how they would handle any interest and market fluctuations.

Risk has multiple dimensions. One side is just the client's willingness to take risk, or they have aversion to risk. Another side is the client's capacity to endure financial loss.

For example, if the client is on a fixed income, based on their investments, chances are that they would be interested in low market risk investments. Risk perception is the final dimension

Our job as a financial advisor is to always review a clients' tolerance and discuss their capacity and perceptions of what real risk is in their portfolio.

Risk aversion can be just as problematic in a portfolio as risk taking. A clear understanding of potential financial outcomes is the most important factor in being able to gauge market fluctuations which then can be matched with a tolerance level.

This course covers:

- The 7 types of investment risks and how to protect against them.
- Definitions and explanations for various investment terms such as Probability Distribution, Reinvestment Rate Risk, Risk Tolerance and many more.
- Benefits of a well-balanced portfolio.
